

Seif Sheikhelarab

Full-Stack Web Developer

Cairo, Egypt seifusama@gmail.com +20 120 716 0533
seif-sheikhelarab.pages.dev linkedin.com/in/seifusama github.com/seifsheikhelarab

Profile

Full-stack web developer focused on secure, scalable web applications with TypeScript, Node.js, React.js, PostgreSQL, and Redis. Experienced in RESTful APIs, authentication, data modeling, and production-ready systems.

Skills

- Programming Languages** — JavaScript, TypeScript, Python, Go, Dart
- Frameworks & Libraries** — Express, React, Hono, Tailwind CSS, Flutter
- Databases** — MongoDB, PostgreSQL, Mongoose, Prisma ORM
- Backend Concepts** — REST APIs, Authentication, RBAC, OpenAPI, CI/CD
- Infrastructure & Tools** — Docker, Linux, GitHub Actions, Redis, Vercel, Cloudflare Workers

Projects

Briefly — E-Commerce CRM System with AI Features (Graduation Project) Oct. 2025 – Jun. 2026
React.js, TypeScript, Bun, Express.js, PostgreSQL, Redis Live Demo | GitHub | API Docs

- Built a multi-tenant e-commerce CRM with full RBAC, customer/order management, and org-scoped data isolation.
- Ran async job processing with BullMQ across 8+ queues for CSV/XLSX import-export, RFM scoring, Shopify sync, and messaging with Redis-backed persistence and sync fallback.
- Built an omnichannel messaging inbox for Meta apps with Socket.IO real-time delivery, and direct-to-S3 media uploads.
- Built Shopify integration with Install flow, Admin API sync, and HMAC-verified webhooks with idempotency handling.
- Implemented subscription billing with Paymob payment gateway, plan-based feature limits, and usage tracking.
- Set up CI/CD with GitHub Actions for Prisma validation, type checking, linting, and 400+ tests.

Catalyst — Real-Time Analytics Pipeline Jun. 2026
TypeScript, Bun, Hono, Kafka, Redis, ClickHouse, TimescaleDB GitHub

- Built 10 microservices on Kafka, CQRS-separated writes and reads, dual API key/JWT auth.
- Processed live streams with Redis counters, HyperLogLog uniques, TimescaleDB rollups, and Pub/Sub WebSocket updates.
- Ran dual storage: ClickHouse for raw event queries (funnels, retention cohorts), TimescaleDB for time-bucketed metrics.
- Added production resilience: retry backoff, DLQ, opossum circuit breakers, Kafka offset management, idempotency keys.
- Set up GeoIP enrichment, session stitching, rate limiting, and observability via Prometheus, Grafana, Jaeger, and Loki.

SignSpeak — Real-Time Sign Language Translation App Jun. 2026
Flutter, Python, FastAPI, MediaPipe, RandomForest, XGBoost Product Page

- Built SignSpeak, a real-time sign language translation app supporting Arabic sign letters and English ASL classes.
- Trained RandomForest and XGBoost models on MediaPipe hand landmarks with a 230-feature ASL classification pipeline.
- Implemented translation flow with hold-to-confirm gestures, word building, TTS output, and frame inference every 250ms.
- Built OAuth2.0 with Google, email OTP verification, bcrypt password hashing, and synced translation history/settings.
- Designed a cross-platform Flutter client with Arabic/English localization, RTL support, dark mode, and high-contrast accessibility.

Tabibi — Multi-Tenant Healthcare Platform

Jun. 2026

Bun, Express.js, Prisma, PostgreSQL, React.js, Socket.IO

Patient App | Admin App | Server | Client | Admin

- Implemented RBAC with 5 roles and automated organization provisioning on signup via Better Auth.
- Built 20+ API route groups covering appointments, prescriptions, medical records, referrals, and CRM with Zod validation and standardized error handling.
- Integrated Google Gemini for an AI medical assistant with symptom analysis, image-based diagnosis support, and doctor recommendations.
- Implemented real-time patient-doctor chat with Socket.IO, image sharing, presence-aware delivery, and Arabic/English i18n with RTL support.

Pivot — Multi-Tenant Feature Flag Service

Jun. 2026

Go, chi, sqlc, PostgreSQL, Redis, Docker

GitHub

- Built Pivot, a multi-tenant feature flag service with REST APIs, domain-driven architecture, and full tenant data isolation.
- Designed a rule-based evaluation engine supporting user targeting, attribute matching, percentage rollouts, and deterministic FNV-1a hashing.
- Implemented read-through Redis caching for flag evaluations with pattern-based invalidation and 5-minute TTL fallback.
- Built workers with asynq for exposure logging and webhook delivery using priority queues and exponential backoff retries.
- Added SHA-256 API key authentication, instant per-environment kill switches, and Docker Compose setup for API, worker, PostgreSQL, and Redis.

Orbit — Job Tracker App and CV Builder

Mar. 2026

Bun, TypeScript, Express.js, PostgreSQL, React.js, Redis

Live Demo | Server | Client

- Built a full-stack job tracker and CV builder with a React/Vite frontend and Express/Bun backend.
- Added Redis caching and a file upload pipeline to improve API responsiveness and streamline resume management.
- Containerized all services with Docker for consistent local development and deployment workflows.
- Crafted a responsive UI with the Google Stitch design system and Tailwind CSS.

Experience

Freelance Client Project — Kiosk POS and Loyalty Platform

Dec. 2025 – Apr. 2026

Node.js, TypeScript, Express.js, Prisma ORM

- Built a real-time transaction engine handling deposits, withdrawals, commissions, and transfers, including shadow wallets for unregistered users.
- Designed a multi-role auth system (Admin/Owner/Worker/Customer) with OTP passcodes, JWT session rotation, and secured credentials across 112 endpoints.
- Engineered an admin dashboard with financial reporting, audit logging, KPI graphs, and suspicious activity alerts across 13 feature modules and 17 data models.
- Implemented a "Spaces" savings feature with goal tracking, deadlines, and dedicated balance isolation per user.

MEAN Stack Web Developer Trainee

Jul. 2025 – Oct. 2025 | 210 Hours

National Telecommunications Institute - Mansoura Branch

- Built secure, scalable full-stack applications with REST APIs, authentication, and testing.
- Completed hands-on training in JWT authentication, Socket.IO, Mongoose, Angular Forms, RxJS, NgRx, and SSR.
- Gained practical experience in freelance project delivery, SEO, UI/UX, and client communication.

Education

Bachelor's Degree in Communications and Computer Engineering

Oct. 2021 – Jun. 2026

Faculty of Engineering — Mansoura University

- GPA: 3.84/4
- Relevant coursework: Operating Systems, Databases, Computer Networks, Structures and Algorithms.

Extracurricular Activity

Backend Committee Trainee, CAT Reloaded — Dec. 2023 – Oct. 2025

Competitive Problem Solver, ICPC Mansoura — Apr. 2023 – Feb. 2024

Certificates

AWS Cloud Foundations, AWS Academy — Cloud Architecture, EC2, S3

Cloud Computing Fundamentals, IBM SkillsBuild — IaaS/PaaS, virtualization, storage solutions

Languages

Arabic — Native

English — Fluent (C1)

French — Basic (A1)
